Feature: How much capacity did canceling elective surgery create?

Case Study: Teaching Hospital

350 beds

Inpatient Beds

72 ICU 278 Acute 92% Inpatient occupancy

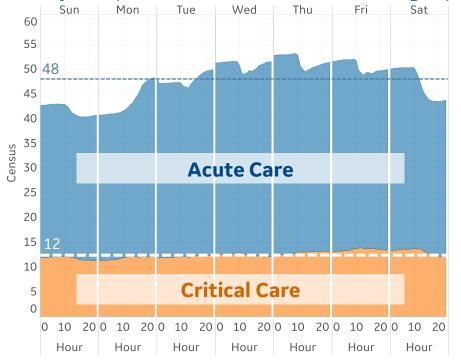

10 Operating Rooms

96% Blocked, 4% Open
73% Utilization
76% Elective
24% Urgent/Emergent

Source:

GE Healthcare Command Centers data

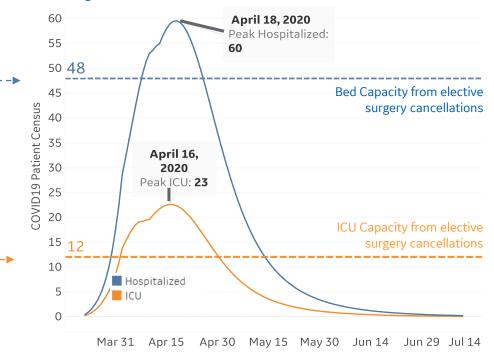

IP Capacity created from Elective Surgery

- 121 patients per week are having surgeries postponed
- Need 310 hours per week of surgery time to catch up

Projected Census of COVID19 Patients

Elective surgery beds free up 50% of needed ICU capacity and 80% of total bed capacity. Additional capacity is created by other cancelled procedures and fewer non-COVID19-related visits.

16 April: Peak ICU census, 23 beds

18 April: Peak census of COVID19 patients, 60 beds

16 May: 10 patients still hospitalized

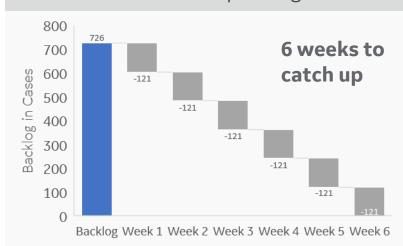

Feature: How long will it take to catch up on elective surgeries?

Completion of Backlog by Week (assuming 6 week shutdown)

Scenario 1: Standard Operating Schedule

- Current block schedule has very little open time to accommodate additional volume
- It will take at least 6 weeks to exhaust the backlog of 726 cases
- Surgeons' availability may be limited as clinic schedule was likely impacted

Scenario 2: Extend Hours with Same Block

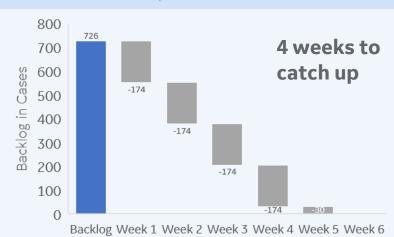

• Same schedule with extended hours can shorten the

- Hours at the end of the day are not as well-utilized due to unpredictability of schedule
- Surgeon, staff, and inpatient bed availability are additional factors to be considered

time to recover to 5 weeks

Inpatient capacity may be limited during the first month

Scenario 3: Optimize Block Schedule

 Work with surgeons and staff to inventory backlog and demand

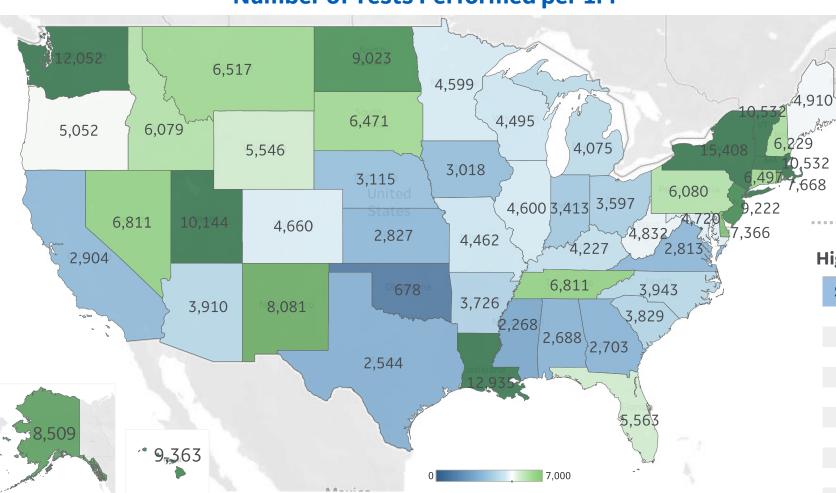

- Identify surgeon day-of-week constraints, given likely disruption of clinic schedule
- Model impact to downstream capacity
- Modify the block schedule to allocate based on demand while leaving sufficient open time for urgent/emergent cases and incremental case volume
- An optimized schedule can help eliminate 6 week backlog in 4 weeks
